Dongjun Hahm

Santa Cruz, CA | 05hahmdongjun@gmail.com | 949-414-1316 |

LinkedIn | GitHub | https://dongjun-hahm.vercel.app/

Skills

Languages: Python, TypeScript, JavaScript, SQL
Cloud: Google Cloud Platform (GCP), Docker, Kubernetes
Frameworks: FastAPI, React/Next.js, REST APIs
AI/ML: Agentic Systems, RAG, MCP, LLM Evaluation, GEPA, DSPy, LangChain, Langfuse, Ollama, Claude Code

Experience

Federal Reserve Board of Governors — AI Intern Jun 2026 - Current

- Partnered with senior leadership to define a reusable multi-agent debate architecture and core feature set for policy and economic review workflows; adopted across multiple divisions, supporting faster, more consistent AI-driven economic policy evaluation.
- Developed a **17-agent, dependency-aware economic paper review system** that models relationships between claims and paper components, identifies load-bearing components, and routes targeted analysis to specialist agents for automated verification and adjudication.
- Developed a recursive self-improving agent evaluation pipeline using GEPA and DSPy, building ground-truth error datasets and evaluation benchmarks with train/validation/test splits to optimize prompts and quantitatively improve error detection.
- Reduced average per-run cost of the multi-agent review system by **57%, from $10.62 to $4.56** through prompt caching and orchestration; built a CLI interface, complementary Overleaf MCP server, and several enterprise data MCP connectors to integrate agentic systems into research and enterprise workflows.
- Researched and developed a novel RAG reranking layer optimized for hard search-constraint coverage.

AI Explainability & Accountability Lab, UC Santa Cruz — Undergrad Student Researcher Jan 2026 - Present

- Developed and evaluated deep learning methods for low-data image classification by integrating memory-based attention mechanisms into neural architectures.
- Conducted hyperparameter tuning and benchmarking across datasets and backbones against small-data learning baselines; configured Kubernetes jobs and GPU resource allocations to orchestrate experiments across shared clusters.

Eversana — Innovation/AI Intern Jun 2025 - Dec 2025

- Developed an agentic AI platform simulating pharmaceutical marketing workflows, integrating research, content generation, and media creation using Google ADK and Gemini 2.5.
- Designed secure FastAPI backend with REST endpoints and a TypeScript frontend, implementing data firewalling and isolated storage in Google Cloud Storage for client security.
- Optimized agent orchestration, **reducing token usage by 25%** and **enabling projected $250K in annual savings** by replacing internal agency workflows with the AI system.
- Built a multi-stage AI video generation pipeline using LLM-based scripting, storyboard image generation, and Veo 3 to automate marketing video production.

Projects

MarketBuddy, *RAG/NLP, LLMs, ChromaDB, Ollama, Python* April 2025 - May 2025

- Built a finance-focused RAG chatbot with FastAPI, delivering real-time insights from Yahoo Finance News.
- Implemented a document embedding and retrieval pipeline using Ollama and ChromaDB for semantic search, as well as LangChain for contextual query processing, enhancing the quality and accuracy of LLM responses.

Education

UC Santa Cruz, B.S. Technology Information Management, B.A. Business Management Econ September 2023 - Present

- GPA: 3.76/4.0 - Senior Standing
- Relevant Coursework: Data Structures and Algorithms, Computer Systems and C Programming, Applied Discrete Mathematics, Systems Analysis and Design, Machine Learning, Introduction to Big Data
